

## Unit 4 Project - Ethics and Leadership

Step 1: With your group, brainstorm **one** ethical situation that many high school students face.

Ex. You are offered the answers to an upcoming final for only \$50, but you're not sure if the final is the same as last year's - do you buy them?

Step 2: Think of 5 'follow up questions' that could change the answer given to the initial question.

Ex. What if the price was lowered to \$25?  
What if you knew the final would be the same?  
etc...

Step 3: Interview **at least 30** people - (there are 3 of you in a group, this shouldn't be a problem!) that fall into this age range... Come up with a plan as to how to record your results - REMEMBER! you will need to present this data to the class!

- Think about: What will your final product be? a video? powerpoint? Prezi? (use this information when brainstorming how to gather your data)
- Will you create "Yes, No, Depends" cards for your interviewees to choose from? Will you have them write down their answers? Will you film or record audio? etc.. think about these things!
- \*\*The last question to your interviewee (so, question #7) should be: **Do you think you chose the 'right' or ethical thing to do? Why or why not?**

Step 4: Collect your data and **analyze your results!** Things to think about... (and to include in your presentation)

- What did the majority response turn out to be \*Yes, No or Depends?
- What did it 'depend' on? (Think about your 5 follow up questions... how did answers change?)
- Did people think their choice was right or ethical, did you agree?
- What conclusions can you bring to the class about this topic and high school kids making the right choices, etc.
